

ARS Campus Valuable to Animal Science Students

Bismarck State College Animal and Range Science students will be developing understanding of laboratory and range sciences at NGPRL as part of their college curriculum.

On October 12th, the BSC Animal Science class visited the range renovation research sites and was lectured on the value of grazing lands for the production of high-value protein for the human diet by Dr. John Hendrickson, USDA-ARS Range Scientist. They will return to work with Dr. Eric Scholljegerdes, USDA-ARS Research Animal Scientist, in the new "Animal Nutrition Laboratory" at NGPRL on October 17th.

Carmel Miller, BSC Animal Agriculture Instructor and active NGPRL Customer Focus Group member expressed her appreciation that USDA supports integrated crop/animal research in this region.
